- The value for L (distance to screen) varies slightly within ±5% depending on the zoom lens characteristics.
 - The zoom lens characteristics may cause slight image distortion.
 - When vertical keystone correction is used, the image is corrected in the direction that reduces its projected size.
 - The brightness varies depending on the zoom setting.
- *1 When the fixed-focus lens (Model No.: ET-ELW21) is attached, the lens shift is not possible. The height position (H) becomes SH/2.
 *2 Available only in the US, Canada and Europe.
 *3 The throw ratio is based on the value during projection with the projected image size of 2.03 m (80").

• The value for L (distance to screen) varies slightly within ±5% depending on the zoom lens characteristics.
 • The zoom lens characteristics may cause slight image distortion.
 • When vertical keystone correction is used, the image is corrected in the direction that reduces its projected size.
 • The brightness varies depending on the zoom setting.
 *1 When the fixed-focus lens (Model No.: ET-ELW21) is attached, the lens shift is not possible. The height position (H) becomes SH/2.
 *2 Available only in the US, Canada and Europe.
 *3 The throw ratio is based on the value during projection with the projected image size of 2.03 m (80").

Formula to calculate projection distance per Projection Lens

To use a screen size not listed in this manual, check the screen size SD (m) and use the respective formula to calculate projection distance.

The unit of all the formulae is m. (Values obtained by the following calculation formulae contain a slight error.)

When calculating a projection distance using image size designation (value in inches), multiply the value in inches by 0.0254 and substitute it into SD in the formula for calculating the projection distance

List of compatible signals

The following table specifies the video signals compatible with the projector.

This projector supports the signal with I in the compatible signal column.

- Symbols that indicate formats are as follows.

—V: VIDEO

—R: RGB

—Y: YCbCr/YPbPr

—H: HDMI (DIGITAL LINK)

- The compatible signals of the DIGITAL LINK input are the same as the compatible signals of the HDMI input.

- Input corresponding to each item in the plug and play column is as follows.

—RGB: RGB 2 input

—HDMI/DL: HDMI1 / HDMI2 input, DIGITAL LINK input

*1 Signal with I in the plug and play column is a signal described in the EDID (extended display identification data) of the projector. The signal that does not have I in the plug and play column can also be input if it is described in the format column. The resolution may not be selected in the computer even if the projector is compatible with the signal that does not have I in the plug and play column.

*2 Pixel-Repetition signal (dot clock frequency 27.0 MHz) only

*3 If pertinent analog signal is input, it can be displayed when the setting suitable for the signal is made on [PICTURE] menu → [RGB SYSTEM]. It is no need to setting when input the digital signal.

*4 VESA CVT-RB (Reduced Blanking)-compliant

*5 Samples the pixels in the image processing circuit and displays the image.

NOTE:

- A signal with a different resolution is converted to the number of display dots. The number of display dots is as follows.
1280 x 800
- The "i" at the end of the resolution indicates an interlaced signal.
- When interlaced signals are connected, flickering may occur on the projected image.
- DIGITAL LINK input compatible signal is the same as HDMI input compatible signal.
- Even the above signals exist, some image signals recorded in special method may not be displayed.

Notes on projector placement and operation

1. Never place objects on top of the projector while it is operating.
2. Make sure there is the unobstructed space as shown below or more around the projector's exhaust openings. In addition to this space, also ensure that there is a sufficient work space for removing and installing filter and other parts.
3. Make sure that nothing blocks the projector's air intake and exhaust openings. Also, install the projector so that cool or hot air from other air conditioning equipment does not flow directly toward the projector's air intake or exhaust openings.
4. Do not install the projector in an enclosed space. If it is necessary to install it in an enclosed space, add a separate ventilation system. If ventilation is insufficient, hot air will accumulate at the intake opening. This may cause the projector's protective circuit to interrupt projector operation.
