INTELLIGENT APPLICATION

1) Intelligent Front Access

Defective module can be located and sprung out by software. Easy to operate and protective for modules. With intelligent front access, Upanels needs no back maintenance space, maximizing space utilization and saving costs.

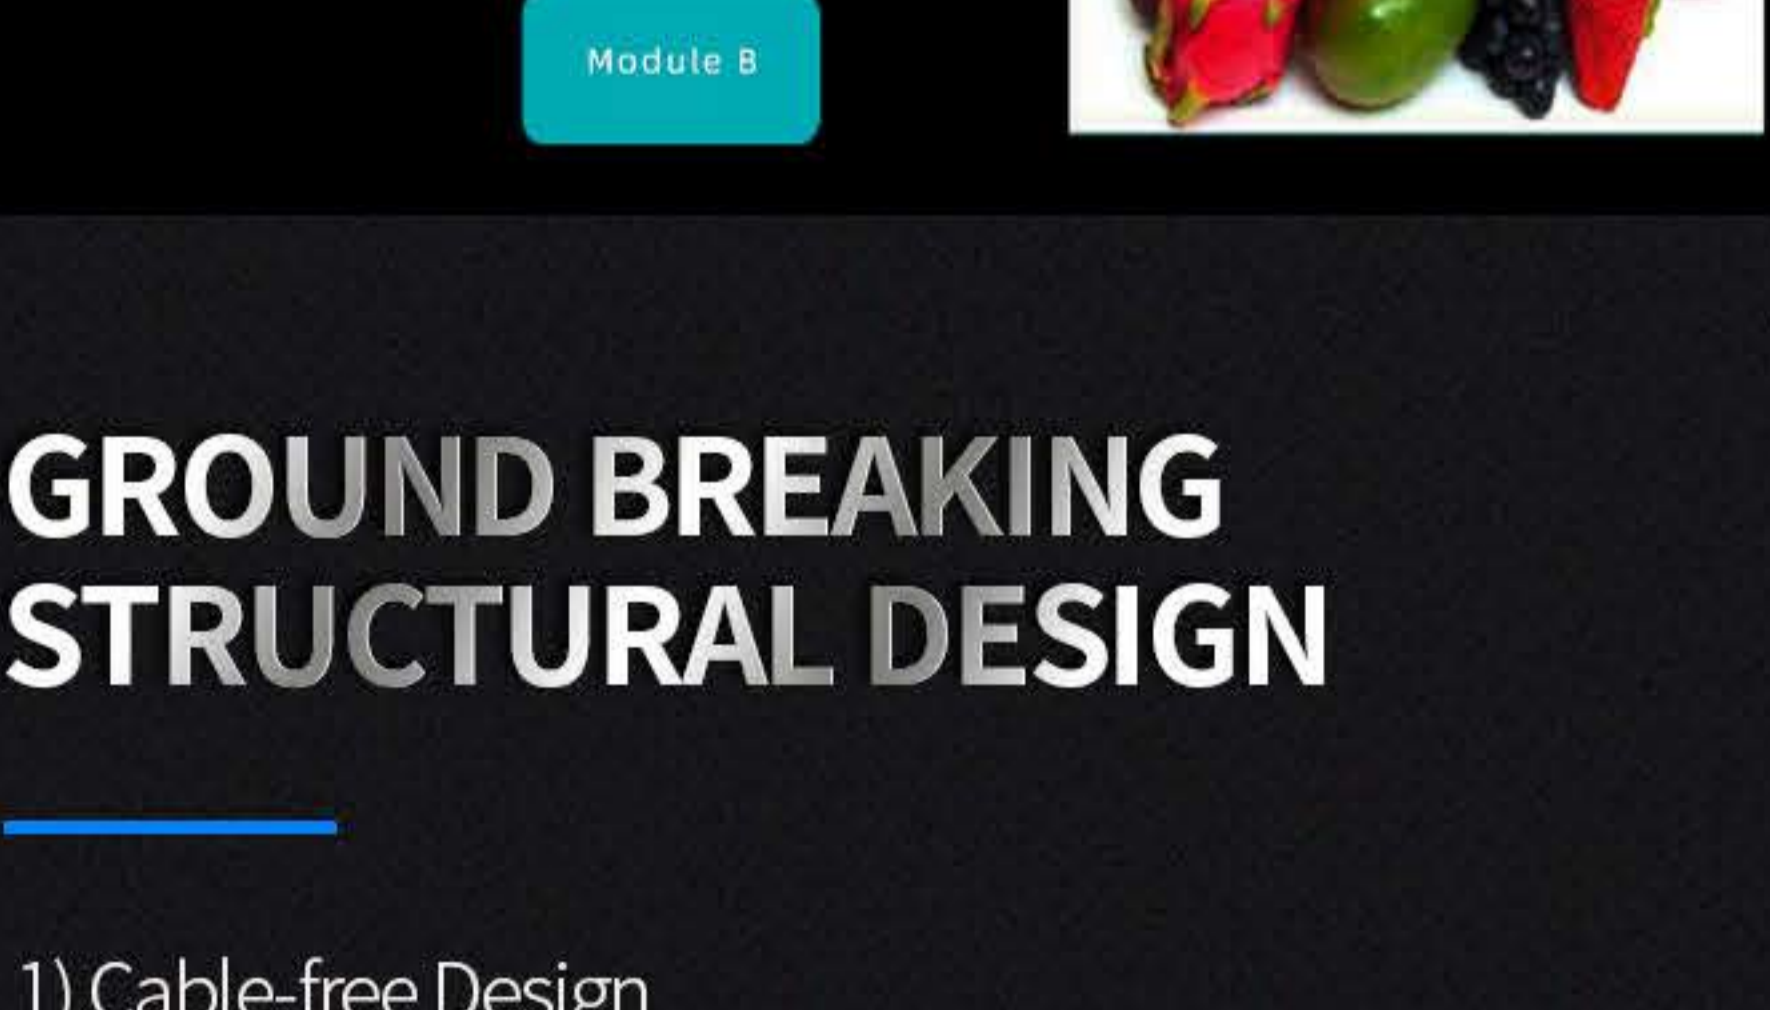

2) Intelligent Monitoring System

Real-time automatic detection of temperature, voltage, connection and IC, ensuring safe operation

3) Intelligent Calibration

Once a new LED module is replaced, the system will update calibration data automatically and achieve perfect color and brightness uniformity of whole screen

GROUND BREAKING STRUCTURAL DESIGN

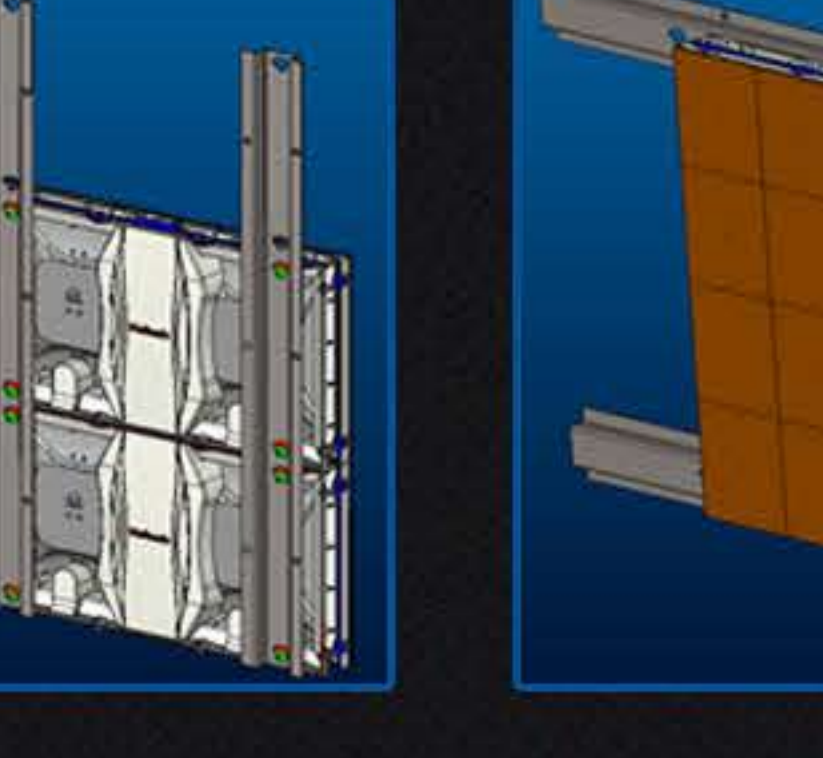

1) Cable-free Design

Signal and power integrated socket design is safe and convenient and allows neat and creative installation

2) Cabinet and Module Separated Structure

Less damage to display body and better heat-dissipating performance

3) Standard Installation Structure

Upanels comes with wall mount installation structure. Free from massive installation steel structure
